

Impact

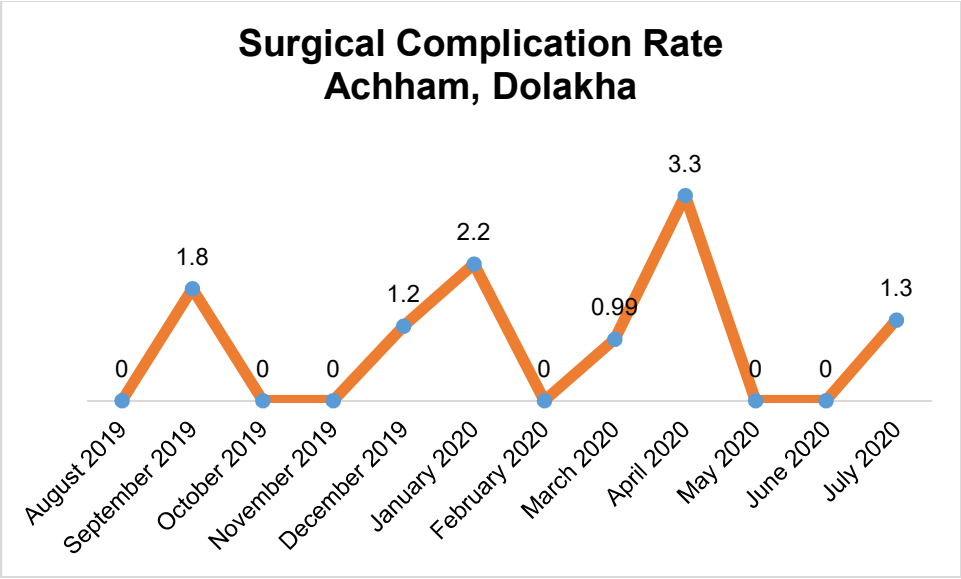

IBR: In Sanfebagar, Achham, percent of birth in healthcare facility where healthcare professionals are present has increased from 76% to 98% in between 2014/2015 to 2019/2020 surpassing sustainable development goals 2030 (90%) and Nepal Health Sector Strategy Target, 2020(70%). This improvement can be attributed to monthly home visit of community health program and safe motherhood program in Bayalpata Hospital.

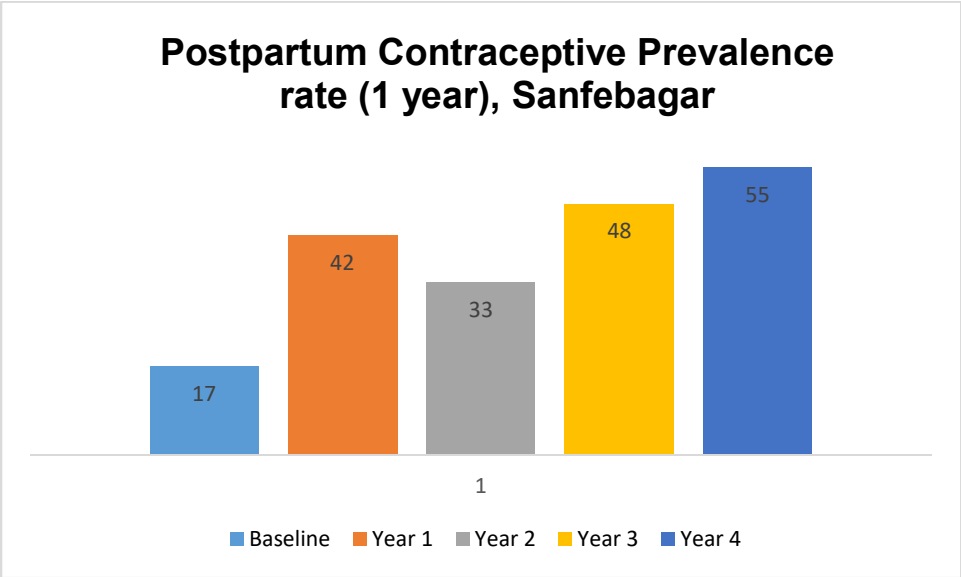

1 million +: We have cared for over one million patients (hospital visits) since founding.

Care at community: Our community health workers have made 440,758 visits in the community since the start of the community health program.

Surgical complication rate: Percentage of complication after major surgeries in our hospitals has remained persistently below WHO threshold of 5% from 2017 to 2020.

PPCPR : The % of married reproductive aged women (15-49) in our catchment area who delivered in the past one year and are using a modern contraceptive method has been increased over the years of implementation of integrated healthcare in Sanfebagar, Achham.
